Problem Statement

Most art transactions are done in other social media like FB groups, Twitter, Reddit, and Instagram. With this new app, clients can, or should be able to, search based on what the artists can provide through classification such as medium used and art style. Artists can promote their art, commissions, prints, and services through this app. A newbie or amateur artist section feature where clients can explore and show support to aspiring artists, since it aims to help pros and beginners alike.
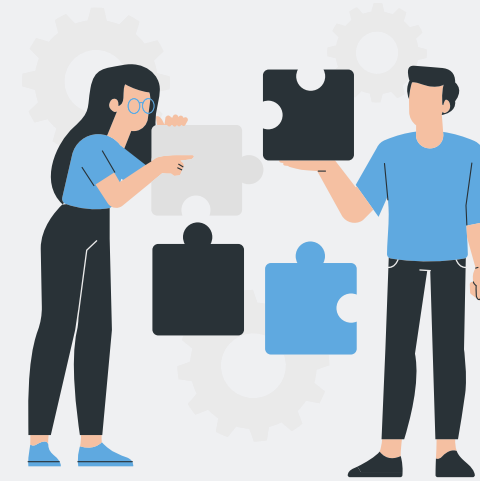

Target Users

Aspiring artists that may not or may be aiming to earn though their craft and potential client looking to commission or purchase merchandizes.

🔍 gora! wherever you go.

Problem Statement

From a distant place in Naga City and those residing outside the Naga City areas, that makes it is a struggle for commuters to await public transportation. Aside from that, it's often crowded with commuters who have no vacant seats. Sometimes, there's a lack of drivers passing through the areas. This proposed project produces a web application that makes it easy for commuters to book and also find a rider nearby in your location. Also, you may choose the mode of your payment through physical money or eMoney (GCash or Maya) to make sure your money is the exact amount. This proposed project makes find riders immediately and is very accommodating.
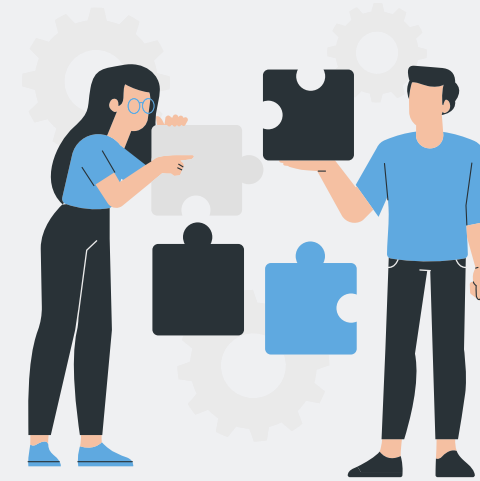

Target Users

Commuters/Passenger

Problem Statement

Adults are scared to go out because of COVID-19. Even though the alert level was declared as low risk, many people (including senior citizens and infants) are still at risk. It is preferable not to go to hospitals especially if the hospital have covid facilities. It is also hard for people to find the right Drug Store to buy medicine from, so an app that has a database of available stocks will help and make life easier for the patients especially PWDs because they will save money, time, and energy finding the right store for them. People need a way to consult on a doctor with no risk of having COVID-19, so this app will help them fix an appointment to their doctors and if the appointment is done and the doctor have prescribed the patient, the app will also display the medicine as well as the available pharmacies to buy it from.

Target Users

Hospitals, Patients, and Pharmacies

Thank you!
